

T SRAVAN KUMAR

DevOps Engineer • Cloud Infrastructure • CI/CD & GitOps

+91 6302522351 | thanatisravankumar6@gmail.com | linkedin.com/in/sravan-devops | github.com/Sravankumar152

PROFESSIONAL SUMMARY

DevOps Engineer with 2 years of experience automating cloud infrastructure and software delivery for mission-critical tolling systems serving multiple US state highway authorities. Specialized in Microsoft Azure (AKS, Azure DevOps) and Google Cloud (GKE) with GitOps-based delivery via Flux CD and ArgoCD. Strong in Terraform, Docker, Kubernetes, and full-stack observability (ELK, Prometheus, Grafana), with a track record of modernizing legacy release pipelines and reducing manual deployment effort across QA, Staging, Training, and Production environments.

KEY ACHIEVEMENTS

- Migrated production GitOps from an outdated, failure-prone Rancher setup to Flux CD, eliminating recurring connection breakages and improving deployment reliability and efficiency.
- Onboarded and managed **55 microservices per client** across **5** US state tolling clients on AKS and GKE, sustaining continuous 24/7 production availability.
- Automated previously manual production deployments by extending Azure DevOps CI/CD pipelines with deployment stages that publish the latest build image tag to the GitOps repository, triggering automated Flux CD sync and rollout.
- Led .NET 6 → .NET 8 and Kubernetes/ELK version upgrades across QA, UAT, Staging, Training, and Production, keeping environments secure and compliant with zero unplanned downtime.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure (AKS, Azure DevOps, Pipelines), Google Cloud (GKE), AWS (EC2, S3, VPC, IAM)

CI/CD & GitOps: Azure DevOps, GitHub Actions, Jenkins, Argo CD, Flux CD, SonarCloud, Git/GitHub

Containers & Orchestration: Docker, Kubernetes (AKS, GKE, EKS), Helm, HAProxy, GitOps

IaC & Config Mgmt: Terraform, Ansible

Monitoring & Observability: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana

Scripting & OS: Bash, PowerShell; Linux (Ubuntu/CentOS), Windows Server, IIS, Nginx, Tomcat

Practices: Release management, Incident response, RBAC & secrets management, Multi-environment deployments, Cost optimization

PROFESSIONAL EXPERIENCE

DevOps Engineer, ProcessQ Inc

Jan 2025 – Present

Client: TransCore • Domain: Tolling (US State Highway Authorities) • Hyderabad, India

Environment: Azure DevOps, AKS, GKE, Docker, Flux CD, HAProxy, Windows Server/IIS, Task Scheduler, PowerShell, ELK, SonarCloud

- Build and maintain CI/CD pipelines in Azure DevOps for automated builds and multi-environment deployments (Dev, QA, Staging, Training, Production) across Windows API/Services and containerized microservices.
- Onboard and operate microservices on AKS and GKE using GitOps with Flux CD — managing deployments, services, config maps, namespaces, and safe rollbacks.
- Administer Windows/IIS environments (sites, bindings, application pools) and Task Scheduler jobs; maintain a hybrid architecture where IIS APIs and Kubernetes microservices communicate via HAProxy.
- Partner with Dev and QA teams to triage and resolve critical production incidents, sustaining 24/7 availability for live state tolling operations.
- Operate monitoring and logging with ELK, Prometheus, and Grafana to detect and resolve issues before end-user impact; enforce code-quality gates via SonarCloud.

Cross-client scope & technical highlights:

- Delivered DevOps across **5 US state highway tolling clients** (NCTA, DeIDOT, WVPA, COC, LSIORB), managing CI/CD, GitOps, and multi-environment deployments end to end.
- Migrated production GitOps from an unstable Rancher setup to Flux CD, resolving frequent connection failures and modernizing the delivery workflow.

- Drove .NET 6 → .NET 8 application upgrades across pipelines and server dependencies (Staging, Training, Production).
- Upgraded AKS and GKE clusters and node pools to the latest Kubernetes version across all environments; upgraded ELK for security compliance.
- Executed cloud-to-on-premises migrations for Dev, QA, Staging, and Training environments, and onboarded new Windows Scheduled Tasks to production.

Cloud & DevOps Intern, CloudifyOps

Jun 2024 – Nov 2024

Bengaluru, India

- Provisioned scalable, secure AWS infrastructure (EC2, S3, VPC) using Terraform, reducing manual setup and enabling repeatable deployments.
- Built Jenkins pipelines for automated builds and implemented continuous delivery to Kubernetes clusters using Argo CD.
- Secured cloud resources with IAM policies and implemented cost-reduction measures while maintaining high availability.

CERTIFICATIONS

- **Oracle Cloud Infrastructure 2023 Certified Foundations Associate** — Oracle, 2023
- **Cloud & DevOps Internship Certificate** — CloudifyOps, 2024

EDUCATION

Master of Business Administration (MBA)

Expected Dec 2026

Vellore Institute of Technology, Vellore

B.Tech, Information Technology

Apr 2024

Panimalar Engineering College, Chennai
